

Differential and investigative aspects of dementia

Abdel-Hafizh, Muhammad Manssour

Ain-Shams Univ., Cairo (EGY). Fac. of Med.

Thesis ; M.Sc. 1988

Dementia represents one of the causes of death, illness & disability among the elderly. Causes of dementia are genetic, viral, bacterial & metabolic. Final expression is wide spread neuronal failure & dementia. The diagnosis is largely based on clinical signs & symptoms. The neuro physiology evaluation as well as the clinical laboratory investigation were discussed in the work.
